Two Page Displays

If you spend most of your time developing two-page layouts, complex drawings, or sophisticated spreadsheets, the Radius Two Page Display™ (TPD) can help alleviate the time and effort crunches typically associated with those types of projects.

The TPD's expansive screen area enables you to solve the most complicated business models, intricate illustrations, and demanding publication riddles.

And to help you be more productive on those days when you're trying to juggle multiple projects, the Radius TPD can arrange several windows simultaneously. That means fast, easy, and flexible access to all of your ongoing tasks.

The Radius TPDs are available in 20" and 21" versions. When these monochrome displays are used with Macintosh Centris, Quadra, or Macintosh II family (NuBus) systems, they deliver up to 256 levels of gray — providing you with photographic quality images.

The TPD/20gs is an ideal display for corporate/business applications, while the TPD/21gs furnishes designers and publishers with the extra workspace that translates into two full pages. Both the TPD/20gs and TPD/21gs are compatible with the Macintosh II, Centris, and Quadra products.

The Low-Cost Leader in Photographic Quality Images

A 20" or 21" display Either TPD screen area allows you to choose the display best suited for your application projects. The TPD/20gs is most appropriate for such desktop business tasks as spreadsheets, word processing, and electronic mail. The

TPD/21gs is ideal for desktop publishing applications like graphic design and illustrations.

Ongoing return on your investment
Radius TPDs surpass all of the compliance guidelines in the EPA Energy Star Program, meaning you can save significant power consumption and costs and extend the life of the display unit. This allows you to maximize the power and reliability of the TPDs — over a longer period of time, and at a fraction of the traditional costs.

High resolution and refresh rate
The Radius TPDs provide flicker-free, two-page views of text and graphics without forcing you to reduce the size of the screen or scroll

through additional ones. This means that you can complete tasks in less time and with less effort than traditional monochrome displays.

Built-in video compatibility
Because a video interface card is built into the Macintosh, you won't need to make an additional investment if you connect the TPD to a Macintosh Centris or Quadra system.

Links with other Radius standards
By incorporating the TPD with Radius' PrecisionColor 8XJ interface module, you can receive photographic-quality images in 256 shades of gray on NuBus systems without built-in video.

Unique Service/Support Programs
On that very rare occasion when your Two Page Display fails, Radius will provide free overnight delivery and on-site replacement[1]. It's called Worry-Free Warranty, and it's the foundation of Radius' award-winning commitment to customer service. Our priority is to deliver timely, hassle-free support programs that minimize downtime and maximize your productivity. Just dial 408/434-1012.
